

W201 Maintenance Manual Index

Introduction

I made these files to make it easier to navigate around your Mercedes-Benz W201 CD Service Library Manuals. If you already have one of my earlier versions, you may want to try this new version.

I would appreciate any and all feedback, concerning any bugs, bad links, bad formatting, bad grammar or spelling, anything else you find that you are not expecting, or anything you expected to find, but did not! Please help us make it better. All suggestions welcomed.

Donationware

Clearly, this is a labor of passion (some would say an obsession). But it is fed in part by the sense of community I have received from belonging to several online Lists and Forums dedicated to these fine automobiles that we drive. PLEASE SUPPORT YOUR FAVORITE FORUM WITH A DONATION.

Revision History

Version 0.5 - 15 Oct 2005

Initial conversion. This is an interim release until I get this Index consistent with the other model Indexes.

I would like to thank Stefan Grell for his help with this project.

How to Use

These files are very simple to install. You won't have to move and rearrange any of the files on the CDs; you just copy your two CDs to your HD and leave them as is. Add my one file and one folder and that's it. Takes about two minutes to setup. Because no PDF files are moved, you can continue to use the MB indexing system at the same time, if you want.

Note: These index files were set up using the Mercedes-Benz Service Manual disks. If you don't have the MB Service Library CDs, they are available from various places, including MBUSA, 1-800-FOR-MERCEDES.

NOTE to PC users: MS Internet Explorer has a bug that does not allow the proper display of certain PDF files. We STRONGLY suggest that you use Netscape or Mozilla for proper display.

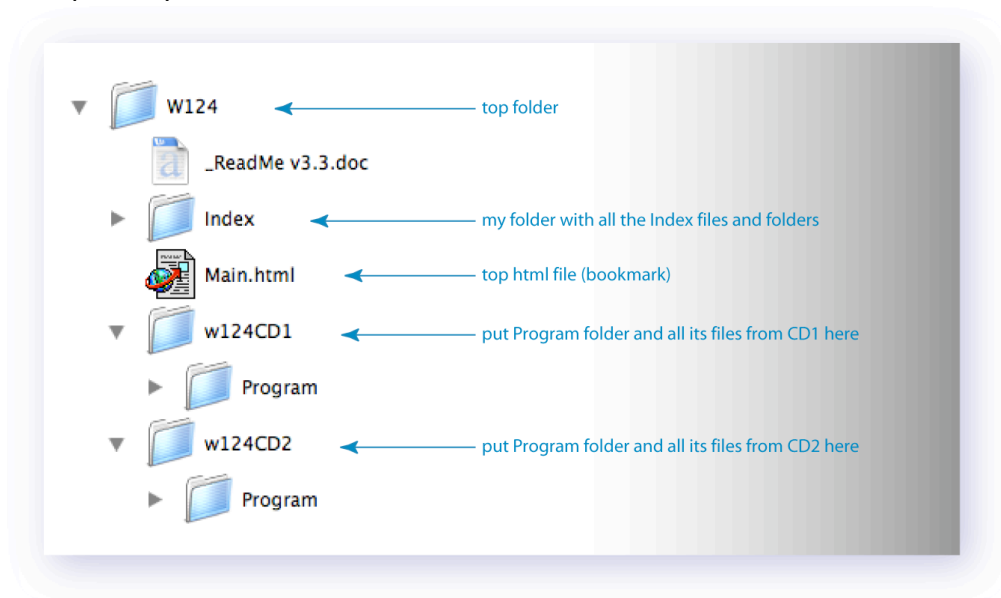

Installation Instructions

It's pretty simple. Here is all you do:

1. Expand the file, W201.zip.
It will de-compress into a folder named "W201". Inside of "W201" will be my main index file, named "Main.html" and a folder named "Index" which contains all of the rest of my stuff. Also in "W201" is one empty folder named "W201CD1"
2. Insert your W201 CD Disc into your computer.
From your CD disk, drag all of the contents of the CD into the "W201CD1" on your hard drive.
NOTE: To save room on your hard drive, you can probably delete everything except the folder named "PDF."
3. After all the files have copied, Eject the CD.
6. Move the "W201" folder to wherever you want on your HD.
This could be your Documents folder, for example. Don't move any files around inside the W201 folder unless you know what you are doing. You could break links.

That's all that there is to it. So now the set up should be:

Example Only – new art TBD...

To run, just open the "Main.html" file in your browser. You can bookmark this page as your starting point.

So now, with this, you can use my index system OR the MB html/flash files.

Please let me know if you are having trouble making it work. I hope that you all find the index an improvement to the CD experience and I also hope that you will let me know if/when you get it to work. Also, if you have any questions or suggestions for improvement, please let me know – constructive criticism is welcome and will never hurt my feelings! ;-)
